RESEARCH REPORT

Minnesota Family Child Care Key Indicator Study

Abstract

This report provides the results from the Minnesota Family Child Care Licensing Key Indicator Study which dealt with over 2000 sites. The study was unique in the level of data skewness, the need for dichotomization of the data base, the elimination of false negatives, the increased effect size, and the stringent p values.

Richard Fiene, Ph.D.
INTRODUCTION

This report will describe the Minnesota Family Child Care Licensing Key Indicator Study completed in 2019. This study was very unique in utilizing several advancements in the Key Indicator Methodology. The first major change is dealing with the full population of family child care sites and not needing to select samples. Over 2000 sites were in the data base (over 17MB) with over 400 rules. Only full reviews were included in the analyses.

The second enhancement was the utilization of data dichotomization. This statistical technique has been used in the past with great success and has been recommended as the best model in determining licensing key indicators because of their skewed data distributions and nominal measurement scale. Within this study, this model was tested against other data base models and it was clearly determined that the 25/50/25 data dichotomization model was the best analytical model to use with these very skewed data. The data distribution from Minnesota family child care is one of the most skewed data distributions analyzed to date by this researcher and is in the Early Childhood Program Quality Improvement and Indicator Model (ECPQI2M).

The third enhancement was the use of full compliance (100% compliance with all rules) as defining the high group in the Key Indicator 2 x 2 Matrix. By utilizing this criterion it dramatically reduces the false negatives to practically zero. When dealing with population data, it is highly recommended in going forward with these types of data analyses to utilize this criterion. With sampled data, it may not be possible to be this stringent.

The fourth enhancement which added to the stringent threshold was placing the p value at .0001 which reduced the number of licensing key indicators to only those that were most significant. This along with a very large effect size (.40+) has increased the thresholds for inclusion as licensing key indicators. In the past a .25+ coefficient has always been the threshold. But with the increased use of population data, this can be increased.
All of these above enhancements are highly recommended for future licensing key indicator research and analyses. It helps to really make the methodology more stable and stringent giving a more conservative estimate with the population data distributions.

**RESULTS**

Here are the results from the analyses performed on the full data distribution. There are 26 key indicator rules out of a total of over 400 rules which represents approximately 5% of all the rules. This is within the typical range of key indicator rule identification, albeit on the lower end (5-10%).

**DISCUSSION**

Although there were some limitations in dealing with this very skewed data distribution, there was a good deal of overlap with the ECPQIM International Data Base with several of the licensing key indicators being present on both (Immunizations, First Aid Training, Fire Drills, Toilet Training Rules). However, Minnesota licensing staff should pay particular attention to the reliability and validity of their monitoring system to ascertain overall face validity of their licensing system. Validation studies as outlined by Stevens & Fiene (2019) would be an appropriate next step.

Appendices

Definitions:

Risk Assessment (RA) - a differential monitoring approach that employs using only those rules, standards, or regulations that place children at greatest risk of mortality or morbidity if violations/citations occur with the specific rule, standard, or regulation.

Key Indicators (KI) - a differential monitoring approach that employs using only those rules, standards, or regulations that statistically predict overall compliance with all the rules, standards, or regulations. In other words, if a program is 100% in compliance with the Key Indicators the program will also be in substantial to full compliance with all rules, standards, or regulations. The reverse is also true in that if a program is not 100% in compliance with the Key Indicators the program will also have other areas of non-compliance with all the rules, standards, or regulations.

Differential Monitoring (DM) - this is a relatively new approach to determining the number of visits made to programs and what rules, standards, or regulations are reviewed during these visits. There are two measurement tools that drive differential monitoring, one is Weighted Risk Assessment tools and the other is Key Indicator checklists. Weighted Risk Assessments determine how often a program will be visited while Key Indicator checklists determine what rules, standards, or regulations will be reviewed in the program. Differential monitoring is a very powerful approach when Risk Assessment is combined with Key Indicators because a program is reviewed by the most critical rules, standards, or regulations and the most predictive rules, standards, or regulations. See Appendix which presents a Logic Model & Algorithm for Differential Monitoring (DMLMA©)(Fiene, 2012).

Early Childhood Program Quality Indicator Model (ECPQIM) – these are models that employ a key indicator or dashboard approach to program monitoring. Major program monitoring systems in early care and education are integrated conceptually so that the overall early care and education system can be assessed and validated. With these models, it is possible to compare results obtained from licensing systems, quality rating and improvement systems (QRIS), risk assessment systems, key indicator systems, technical assistance, and child development/early learning outcome systems. The various approaches to validation are interposed within this model and the specific expected correlational thresholds that should be observed amongst the key elements of the model are suggested. Key Elements of the model are the following (see Appendix for details): CI = state or federal standards, usually rules or regulations that measure health and safety - *Caring for Our Children or Head Start Performance Standards* will be applicable here. PQ = Quality Rating and Improvement Systems (QRIS) standards at the state level; *ERS (ECERS, ITERS, FDCRS), CLASS, or CDPES* (Fiene & Nixon, 1985). RA = risk assessment tools/systems in which only the most critical rules/standards are measured. Stepping Stones is an example of this approach. KI = key indicators in which only predictor rules/standards are measured. The Thirteen Indicators of Quality Child Care is an example of this approach. DM = differential monitoring decision making in which it is determined if a program is in compliance or not and the number of visits/the number of rules/standards are ascertained from a scoring protocol. PD = technical assistance/training and/or professional development system which provides targeted assistance to the program based upon the DM results. CO = child outcomes which assesses how well the children are developing which is the ultimate goal of the system. Please see the following Appendix for the Logic Model and Algorithm.
Algorithms and Logic Model:

Theory of Regulatory Compliance Algorithm (Fiene KIS Algorithm)

1) $\Sigma R = C$
2) Review $C$ history x 3 yrs
3) $NC + C = Cl$
4) If $Cl = 100$ -> $KI$
5) If $Kl > 0$ -> $Cl$ or if $C < 100$ -> $Cl$
6) If $RA$ ($NC% > 0$) -> $Cl$
7) $KI + RA = DM$
8) $KI = ((A)(D)) - ((B)(E)) / \sqrt{(W)(X)(Y)(Z)}$
9) $RA = \Sigma R1 + \Sigma R2 + \Sigma R3 + \ldots \Sigma Rn / N$
10) $(TRC = 99\%) + (\phi = 100\%)$
11) $(CI < 100) + (CIPQ = 100) -> KI (10\% CI) + RA (10-20\% CI) + KIQP (5-10\% of CIPQ) -> OU$

Legend:

$R = $ Rules/Regulations/Standards  
$C = $ Compliance with Rules/Regulations/Standards  
$NC = $ Non-Compliance with Rules/Regulations/Standards  
$CI = $ Comprehensive Instrument for determining Compliance  
$\phi = $ Null  
$KI = $ Key Indicators; $KI >= .26+$ Include; $KI <= .25$ Null, do not include  
$RA = $ Risk Assessment  
$\Sigma R1 = $ Specific Rule on Likert Risk Assessment Scale ($1-8$; $1 = $ low risk, $8 = $ high risk)  
$N = $ Number of Stakeholders  
$DM = $ Differential Monitoring  
$TRC = $ Theory of Regulatory Compliance  
$CIPQ = $ Comprehensive Instrument Program Quality  
$KIPQ = $ Key Indicators Program Quality  
$OU = $ Outcomes

$A = $ High Group + Programs in Compliance on Specific Compliance Measure ($R1...Rn$).  
$B = $ High Group + Programs out of Compliance on Specific Compliance Measure ($R1...Rn$).  
$E = $ Low Group + Programs in Compliance on Specific Compliance Measure ($R1...Rn$).  
$D = $ Low Group + Programs out of Compliance on Specific Compliance Measure ($R1...Rn$).  
$W = $ Total Number of Programs in Compliance on Specific Compliance Measure ($R1...Rn$).  
$X = $ Total Number of Programs out of Compliance on Specific Compliance Measure ($R1...Rn$).  
$Y = $ Total Number of Programs in High Group ($\Sigma R = 98+$).  
$Z = $ Total Number of Programs in Low Group ($\Sigma R <= 97$).  
High Group = Top 25% of Programs in Compliance with all Compliance Measures ($\Sigma R$).  
Low Group = Bottom 25% of Programs in Compliance with all Compliance Measures ($\Sigma R$).
DIFFERENTIAL MONITORING LOGIC MODEL & ALGORITHM (DMLMA©) (Fiene, 2012): A 4th Generation ECPQIM – Early Childhood Program Quality Indicator Model

CI x PQ => RA + KI => DM + PD => CO

Definitions of Key Elements:

CI = Comprehensive Licensing Tool (Health and Safety) (Caring for Our Children)
PQ = ECERS-R, FDCRS-R, CLASS, CDPES (Caregiver/Child Interactions/Classroom Environment)
RA = Risk Assessment, (High Risk Rules) (Stepping Stones)
KI = Key Indicators (Predictor Rules) (13 Key Indicators of Quality Child Care)
DM = Differential Monitoring, (How often to visit and what to review)
PD = Professional Development/Technical Assistance/Training
CO = Child Outcomes (See Next Slide for PD and CO Key Elements)

**Preschooler**

Preschooler has the meaning given in Minnesota Statutes, section 245A.02, subdivision 19, paragraph (e).

**Provider**

Provider means the license holder and primary caregiver.

**Related**

Related has the meaning given in Minnesota Statutes, section 245A.02, subdivision 13.

**Regularly or Regular Basis**

Regularly or regular basis means a cumulative total of more than 30 days within a 12-month period.

**Residence**

Residence means the dwelling unit, as defined by section 405 of the State Building Code, in which day care is provided and which is occupied as a home.

**School-age**

School-age has the meaning given in Minnesota Statutes, section 245A.02, subdivision 19, paragraph (f).

**Substitute**

A substitute is an adult at least 18 years of age who assumes the responsibility of the provider as specified in part 9502.0365, subpart 5.

**Supervision**

Supervision means a caregiver being within sight or hearing of an infant, toddler, or preschooler at all times so that the caregiver is capable of intervening to protect the health and safety of the child. For a school-age child, it means a caregiver being available for assistance and care so that the child's health and safety is protected.

**Variance**

A variance is written permission by the commissioner for a provider or applicant to depart from the provisions of parts...

**Licensing Process**

- **Application**
  - The applicant submitted an application on the department form in the county where the applicant resides.

- **Licensing Study**
  - The applicant gives the agency access to the residence for a licensing study.

- **Hazardous condition**
  - The applicant obtains an inspection from a fire marshal, building official, or agent of a board of health to verify the absence of hazard and report to agency.

- **Correction of Hazardous Condition**
  - The applicant corrected any condition that was cited as hazardous by a fire marshal, building official, or authorized agent.

- **Fire Code Inspection**
  - A home with one or more of the following conditions requires an inspection by a fire marshal:
    - Solid Fuel
      - the home has a freestanding solid fuel heating appliance
    - Manufactured Home
      - the home is a manufactured (mobile) home
    - Licensed Capacity
      - the applicant is seeking a licensed capacity of more than ten
    - Basement Use
      - the applicant wishes to use the basement to provide care
    - Multiple Occupancy Building
      - the residence is in a building with two or more residential dwelling units such as a duplex, apartment building, or townhome
    - Mixed Occupancy Building
      - the residential structure contains nonresidential occupancies

**Licensed Capacity, Ratios, and Age Distributions**

<p>| 9502.0365, subpart 1 | Capacity Limits | Family day care and group family day care providers comply with part 9502.0367, which limits the total number of children and the number of preschoolers, toddlers, and infants who may be in care at any one time, and provides for the number of adults who are required to be present. | | | |
| x | 9502.0365, subpart 1.A | Capacity Limits - # of Children | The provider is licensed for the total number of children, ten years of age or younger, who are present in the residence at any one time. The licensed capacity includes all children of any caregiver when the children are present in the residence. | | |
| x | 9502.0365, subpart 1.B | Capacity Limits - Age of Children | The provider adhered to the age distribution restrictions that specify the number of children under school-age, infants, and toddlers who are in care. | | |
| x | 9502.0365, subpart 2 | Specialized Infant and Toddler Care | In specialized infant and toddler group family day care programs, the caregivers are all adults. | | |
| x | 9502.0365, subpart 3 | Newborn care | When a newborn is in care and only one adult caregiver is present, the newborn is the only child under 12 months of age. | | |
| x | 9502.0365, subpart 3 | Newborn Care-Other Children | When a newborn is in care and only one adult caregiver is present, the provider is not caring for more than two other children at the same time. | | |
| x | 9502.0365, subpart 4 | Helpers | The use of a helper instead of a second adult caregiver is limited to times when there is no more than one infant or toddler present. | | |
| x | 9502.0365, subpart 5 | Supervision - Primary Caregiver | The licensed provider is the primary provider of care in the residence. | | |
| x | 9502.0365, subpart 5 | Supervision by a Caregiver | Children in care are supervised by a caregiver. | | |
| x | 9502.0365, | Supervision - Use of a Substitute | | |</p>

### Systems and Records

- **245A.041, subdivision 3.a**  
  - **Record Retention**  
    - The license holder maintains and stores records in a manner that allows for review by the commissioner as identified in section 245A.04, subdivision 5.

- **245A.041, subdivision 3.a.1**  
  - **Service Recipient Records**  
    - The license holder maintains service recipient records, including verification of service delivery, is maintained for a minimum of five years following discharge or termination of service.

- **245A.041, subdivision 3.a.2**  
  - **Personnel Records**  
    - The license holder maintains personnel records for a minimum of five years following termination of employment.

- **245A.041, subdivision 3.a.3**  
  - **Program Administration and Financial Records**  
    - The license holder maintains program administration and financial records for a minimum of five years from the date the program closes.

### Correction Orders and Conditional Licenses

- **245A.06, subdivision 8**  
  - **Requirement to Post Conditional License**  
    - Upon receipt of an Order of Conditional license, the license holder has posted the order of conditional license in a place that is conspicuous to the people receiving services and all visitors to the facility for two years.

- **245A.07, subdivision 5**  
  - **Requirement to Post Licensing Action**  
    - Upon receipt of any licensing action, the license holder has posted the order in a place that is conspicuous to the people receiving services and all visitors to the facility for two years.

### Special Conditions for Nonresidential Programs

- **245A.14, subdivision 10**  
  - **Portable Wading Pools**  
    - Prior to allowing a child to use a portable wading pool at a family day care or group family day care home, the license holder has obtained written consent from the parent or legal guardian.

- **245A.14, subdivision 11.a.2**  
  - **Swimming Pools - Consent**  
    - Prior to allowing a child to use a swimming pool, that is located at the family or group family day care home, the LH has obtained written consent from the parent or legal guardian of the child.

### BGS - Info Provided by Subject

The individual, who is the subject of a BGS, has provided sufficient information to ensure an accurate study.

### BGS - Known Info

The applicant/license holder has helped with the study by giving the commissioner criminal conviction data and reports about the maltreatment of adults that are substantiated and maltreatment of minors that are substantiated.

### BGS - New Info

When the applicant/license holder has received information about the possible criminal or maltreatment history of an individual who is subject to a study, the applicant/license holder has immediately provided the information to the commissioner.

### Obligation to Remove DQd Individual

Upon receipt of notice from the commissioner, the license holder has removed the disqualified individual from direct contact with persons served by the licensed program.

### BGS - Record Keeping

The program has documented the date each background study was initiated and the date the subject of the study first had direct contact.

### BGS - Notification of Set-aside or Variance

Written notification has been provided to parents considering enrollment of a child or parents of a child attending the family child care program if the program employs or has living in the home any individual who is the subject of either a set-aside or variance.

</table>
The Key Indicator Methodology has recently been highlighted in a very significant Federal Office of Child Care publication series on Contemporary Licensing Highlights. In that Brief the Key Indicator Methodology is described as part of a differential monitoring approach along with the risk assessment methodology. Because of the potential increased interest in the Key Indicator Methodology, a brief update regarding the technical details of the methodology is warranted. For those readers who are interested in the historical development of Key Indicators I would suggest they download the resources available at the end of the paper.

This brief paper provides the technical and statistical updates for the key indicator methodology based upon the latest research in the field related to licensing and quality rating & improvement systems (QRIS). The examples will be drawn from the licensing research but all the reader needs to do is substitute “rule” for “standard” and the methodology holds for QRIS.

Before proceeding with the technical updates, let me review the purpose and conceptual underpinning of the Key Indicator Methodology. Key Indicators generated from the methodology are not the rules that have the highest levels of non-compliance nor are they the rules that place children most at risk of mortality or morbidity. Key Indicators are generally somewhere in the middle of the pack when it comes to non-compliance and risk assessment. The other important conceptual difference between Key Indicators and risk assessment is that only Key Indicators statistically predict or are predictor rules of overall compliance with all the rules for a particular service type. Risk assessment rules do not predict anything other than a group of experts has rated these rules as high risk for children’s mortality/morbidity if not complied with.

Something that both Key Indicators and risk assessment have in common is through their use one will save time in their monitoring reviews because you will be looking at substantially fewer rules. But it is only with Key Indicators that you can statistically predict additional compliance or non-compliance; this is not the case with risk assessment in which one is only looking at those rules which are a state’s high risk rules. And this is where differential monitoring comes into play by determining which programs are entitled to either Key Indicators and/or risk assessment for more abbreviated monitoring reviews rather than full licensing reviews (the interested reader
should see the *Contemporary Licensing Series on Differential Monitoring, Risk Assessment and Key Indicators* published by the Office of Child Care.

**Technical and Statistical Framework**

One of the first steps in the Key Indicator Methodology is to sort the licensing data into high and low groups, generally the highest and lowest licensing compliance with all the rules can be used for this sorting. Frequency data will be obtained on those programs in the top level (usually top 20-25%) and the bottom level (usually the bottom 20-25%). The middle levels are not used for the purposes of these analyses. These two groups (top level & the bottom level) are then compared to how each program scored on each child care rule (see Figure 1). In some cases, especially where there is very high compliance with the rules and the data are extremely skewed, it may be necessary to use all those programs that are in full (100%) compliance with all the rules as the high group. The next step is to look at each rule and determine if it is in compliance or out of compliance with the rule. This result is cross-referenced with the High Group and the Low Group as depicted in Figure 1.

<table>
<thead>
<tr>

<td>C</td>
<td>D</td>
<td>Z</td>
</tr>
<tr>
<td><strong>Column Total</strong></td>
<td>W</td>
<td>X</td>
<td><strong>Grand Total</strong></td>
</tr>
</tbody>
</table>

Once the data are sorted in the above matrix, the following formula (Figure 2) is used to determine if the rule is a key indicator or not by calculating its respective Key Indicator coefficient. Please refer back to Figure 1 for the actual placement within the cells. The legend (Figure 3) below the formula shows how the cells are defined.
Figure 2 – Formula for Fiene Key Indicator Coefficient

\[
\phi = (A)(D) - (B)(C) \div \sqrt{(W)(X)(Y)(Z)}
\]

Figure 3 – Legend for the Cells within the Fiene Key Indicator Coefficient

\begin{align*}
A &= \text{High Group + Programs in Compliance on Specific Rule.} \\
B &= \text{High Group + Programs out of Compliance on Specific Rule.} \\
C &= \text{Low Group + Programs in Compliance on Specific Rule.} \\
D &= \text{Low Group + Programs out of Compliance on Specific Rule.} \\
W &= \text{Total Number of Programs in Compliance on Specific Rule.} \\
X &= \text{Total Number of Programs out of Compliance on Specific Rule.} \\
Y &= \text{Total Number of Programs in High Group.} \\
Z &= \text{Total Number of Programs in Low Group.}
\end{align*}

Once the data are run through the formula in Figure 2, the following chart (Figure 4) can be used to make the final determination of including or not including the rule as a key indicator. Based upon the chart in Figure 4, it is best to have a Key Indicator Coefficient approaching +1.00 however that is rarely attained with licensing data but has occurred in more normally distributed data.

Continuing with the chart in Figure 4, if the Key Indicator Coefficient is between +.25 and -.25, this indicates that the indicator rule is unpredictable in being able to predict overall compliance with the full set of rules. Either a false positive in which the indicator appears too often in the low group as being in compliance, or a false negative in which the indicator appears too often in the high group as being out of compliance. This can occur with Key Indicator Coefficients above +.25 but it becomes unlikely as we approach +1.00 although there is always the possibility that other rules could be found out of compliance. Another solution is to increase the number of key indicator rules to be reviewed but this will cut down on the efficiency which is desirable and the purpose of the key indicators.

The last possible outcome with the Key Indicator Coefficient is if it is between -.26 and -1.00, this indicates that the indicator is a terrible predictor because it is doing just the opposite of the decision we want to make. The indicator rule would predominantly be in compliance with the low group rather than the high group so it would be statistically predicting overall non-compliance. This is obviously something we do not want to occur.

Figure 5 gives the results and decisions for a QRIS system. The thresholds in a QRIS system are increased dramatically because QRIS standard data are less skewed than licensing data and a
more stringent criterion needs to be applied in order to include particular standards as Key Indicators.

**RESOURCES AND NOTES**

For those readers who are interested in finding out more about the Key Indicator Methodology and the more recent technical updates as applied in this paper in actual state examples, please see the following publication:

In this book of readings/presentations are examples and information about differential monitoring, risk assessment, key indicators, validation, measurement, statistical dichotomization of data, and regulatory paradigms. This publication delineates the research projects, studies, presentations, & reports completed during 2013-14 in which these updates are drawn from.
For those readers interested in a historical perspective to the development of the Key Indicator methodology and licensing measurement, please see the following publications (most of these publications are available at the following website: http://rikinstitute.wikispaces.com/home):

Technical Detail Notes: Validation Updates to the Fiene Key Indicator Systems

January 2015

These notes will provide guidance on validating existing Key Indicator Licensing Systems. These notes are based upon the last three years of research and data analysis in determining the best means for conducting these validation studies.

These notes are based upon existing Key Indicator Systems in which data can be drawn from an already present data base which contains the comprehensive instrument (total compliance data) and the key indicator instrument (key indicator rule data). When this is in place and it can be determined how licensing decisions are made: full compliance with all rules or substantial compliance with all rules to receive a license, then the following matrix can be used to begin the analyses (see Figure 1):

<table>
<thead>
<tr>
<th>Figure 1</th>
<th>Providers who fail the Key Indicator review</th>
<th>Providers who pass the Key Indicator review</th>
<th>Row Totals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Providers who fail the Comprehensive review</td>
<td>W</td>
<td>X</td>
<td>Row Total</td>
</tr>
<tr>
<td>Providers who pass the Comprehensive Review</td>
<td>Y</td>
<td>Z</td>
<td></td>
</tr>
<tr>
<td>Column Totals</td>
<td></td>
<td></td>
<td>Grand Total</td>
</tr>
</tbody>
</table>
A couple of annotations regarding Figure 1.

\[ W + Z \] = the number of agreements in which the provider passed the Key Indicator review and also passed the Comprehensive review.

\[ X \] = the number of providers who passed the Key Indicator review but failed the Comprehensive review. This is something that should not happen, but there is always the possibility this could occur because the Key Indicator Methodology is based on statistical methods and probabilities. We will call these False Negatives (FN).

\[ Y \] = the number of providers who failed the Key Indicator review but passed the Comprehensive review. Again, this can happen but is not as much of a concern as with “\[ X \]”. We will call these False Positives (FP).

Figure 2 provides an example with actual data from a national organization that utilizes a Key Indicator System. It is taken from 50 of its program providers.

<table>
<thead>
<tr>
<th>Figure 2</th>
<th>Providers who fail the Key Indicator review</th>
<th>Providers who pass the Key Indicator review</th>
<th>Row Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Providers who fail the Comprehensive review</td>
<td>25</td>
<td>1</td>
<td>26</td>
</tr>
<tr>
<td>Providers who pass the Comprehensive Review</td>
<td>7</td>
<td>17</td>
<td>24</td>
</tr>
<tr>
<td>Column Total</td>
<td>32</td>
<td>18</td>
<td>50</td>
</tr>
</tbody>
</table>

To determine the agreement ratio, we use the following formula:

\[
\frac{A}{A + D}
\]

Where \( A = \text{Agreements} \) and \( D = \text{Disagreements} \).
Based upon Figure 2, \( A + D = 42 \) which is the number of agreements; while the number of disagreements is represented by \( B = 1 \) and \( C = 7 \) for a total of 8 disagreements. Putting the numbers into the above formula:

\[
\frac{42}{42 + 8}
\]

Or

\[
.84 = \text{Agreement Ratio}
\]

The False Positives (FP) ratio is .14 and the False Negatives (FN) ratio is .02. Once we have all the ratios we can use the ranges in Figure 3 to determine if we can validate the Key Indicator System. The FP ratio is not used in Figure 3 but is part of the Agreement Ratio.

**Figure 3 – Thresholds for Validating the Fiene Key Indicators for Licensing Rules**

<table>
<thead>
<tr>
<th>Agreement Ratio Range</th>
<th>False Negative Range</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1.00) – (.90)</td>
<td>.05+</td>
<td>Validated</td>
</tr>
<tr>
<td>(.89) – (.85)</td>
<td>.10 - .06</td>
<td>Borderline</td>
</tr>
<tr>
<td>(.84) – (.00)</td>
<td>.11 or more</td>
<td>Not Validated</td>
</tr>
</tbody>
</table>

Fiene Algorithm for Generating Regulatory Compliance Key Indicators (RCKI)

Add up regulatory non-compliances for all programs, agencies, jurisdictions, etc...

Review Regulatory Compliance history sorted from high to low

Nominal (Compliance/Non-Compliance) or ordinal measurement (Gradient) scaling

Top 25% (High Group) and bottom 25% (Low Group) of regulatory compliance scores

Drop out the middle 50% of regulatory compliance scores

Develop a 2 x 2 matrix which includes each regulation by the High Group and Low Group

Cells of the Matrix:  
A = High Group + Programs in Compliance on Specific Regulation
B = High Group + Programs out of Compliance on Specific Regulation
C = Low Group + Programs in Compliance on Specific Regulation
D = Low Group + Programs out of Compliance on Specific Regulation

W = Total Number of Programs in Compliance on Specific Regulation
X = Total Number of Programs out of Compliance on Specific Regulation
Y = Total Number of Programs in High Group.
Z = Total Number of Programs in Low Group

Use the following formula: \((A)(D) - (B)(C) / \sqrt{W)(X)(Y)(Z)} = \text{RCKI}\)

Result will range from −1 to +1

+.5 to +1.0 will be included as Regulatory Compliance Key Indicators (RCKI). All other regulations will not be included.
Fiene Algorithm for Generating Regulatory Compliance Key Indicators (RCKI)

1. Add up regulatory non-comipliances for all programs, agencies, jurisdictions, etc...
2. Review Regulatory Compliance history sorted from high to low
3. Nominal (Compliance(1)/Non-Compliance(0)) or ordinal measurement (Gradient(1-5)) scaling
4. Take Risk Assessment Weighting (1-9) into account and apply to nominal or ordinal scaling.
5. Top 25% (High Group) and bottom 25% (Low Group) of regulatory compliance scores
6. Drop out the middle 50% of regulatory compliance scores
7. Develop a 2 x 2 matrix which includes each regulation by the High Group and Low Group
8. Cells of the Matrix: A = High Group + Programs in Compliance on Specific Regulation
9. B = High Group + Programs out of Compliance on Specific Regulation
10. C = Low Group + Programs in Compliance on Specific Regulation
11. D = Low Group + Programs out of Compliance on Specific Regulation
12. W = Total Number of Programs in Compliance on Specific Regulation
13. X = Total Number of Programs out of Compliance on Specific Regulation
14. Y = Total Number of Programs in High Group.
15. Z = Total Number of Programs in Low Group
16. Use the following formula: \(\frac{(A)(D) - (B)(C)}{\sqrt{(W)(X)(Y)(Z)}} = \text{RCKI}\)
17. Result will range from \(-1\) to \(+1\)
18. \(+.5\) to \(+1.0\) will be included as Regulatory Compliance Key Indicators (RCKI). All other regulations will not be included.
